**Re: Implemented Corrective Measures – Groundwater Recovery and Treatment System  
Semi-Annual Post Closure Monitoring Report**  
Former Amphenol Facility #IND 044 587 848  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Thomas:

This Implemented Corrective Measures – Groundwater Recovery and Treatment System (ICM-GRTS) Report is submitted on behalf of the “Performing Respondent”, Amphenol Corporation. This report summarizes the “Work Efforts” completed during the second semi-annual period (April 28 through October 31, 2014) of the calendar year 2014. The “Work Efforts” were conducted pursuant to Section VIII of the Administrative Order on Consent for Corrective Measures Implementation (CMI) for the above referenced site and in accordance with the approved Post Closure Monitoring Work Plan submitted to the USEPA in March 2000.

The “Work Efforts” performed at the site included:

- Operations and Maintenance of the Groundwater Recovery and Treatment System
- Groundwater Elevation Monitoring
- Quarterly Sampling and Analysis of the Groundwater Recovery and Treatment System
- Semi-Annual Groundwater Sampling and Analysis

#### **Groundwater Recovery and Treatment System – Operations and Maintenance**

The Implemented Corrective Measure (ICM) at the site is a groundwater pump and treat system consisting of 5 recovery wells (RW-1 through RW-5). Recovery wells RW-1, RW-2, and RW-3 have 5 foot screened intervals at depths of approximately 15 to 20 ft BGS and 2 foot sumps. Recovery well RW-4 has a 10 foot screened interval at a depth of approximately 13 to 23 ft BGS and a 4-foot sump. An additional recovery well (RW-5) was installed in June 2010 and activated in July 2010 in conjunction with supplemental bioremediation activities completed at the site. Recovery well RW-5 has a 10 foot screened interval at a depth of approximately 14 to 24 feet BGS and a 2-foot sump. Electric submersible pumps are used to pump groundwater from the recovery wells to an air stripper where volatile organic compounds (VOCs) are volatilized and exhausted to the atmosphere. Groundwater effluent from the air stripper is discharged to the City of Franklin municipal sanitary sewer system. In addition to VOC removal, the ICM is designed to lower the potentiometric groundwater surface to below the level of the existing storm sewer invert.

To ensure proper performance of the groundwater recovery and treatment system, IWM Consulting Group, LLC (IWM) personnel conducted routine operation and maintenance (O&M) inspections. Bi-weekly O&M

duties include measurement of influent flow rates, measurement of groundwater elevations of the recovery wells, routine inspections and necessary repairs of influent and effluent lines, and air stripper maintenance. On a monthly basis, depth to groundwater is recorded in monitoring wells IT-2, IT-3, MW-3, MW-9, MW-12R, MW-20, MW-21, MW-22, MW-24, MW-26, MW-27, MW-28, MW-29, MW-30, and recovery wells RW-1 through RW-5. The air stripper trays and effluent discharge line are inspected and cleaned as necessary during monthly O&M activities. Also, influent sediment filters are replaced monthly. Quarterly O&M activities include complete disassembly and cleaning of the air stripper trays and sump. The sequestering agent system is also maintained on a quarterly basis. The air stripper blower lubrication and integrity is inspected on a quarterly basis. All recovery well pumps are also removed and cleaned on a quarterly basis. Monthly O&M reports are attached in **Appendix A**.

During this reporting period (April 28 through October 31, 2014), approximately 7,510,690 gallons of groundwater were recovered, treated, and discharged. The combined average influent flow rate for the period was 28 gpm. To date, approximately 201,660,479 gallons have been recovered since the groundwater recovery and treatment system was activated in February 1995. Groundwater recovery rates to date are provided in **Table 1**.

Overall the groundwater recovery and treatment system was very reliable and was operational during the majority of this reporting period. However, the following operational issues were encountered:

IWM personnel mobilized to the site on June 14, 2014 to complete monthly and biweekly operation and maintenance activities. The groundwater recovery and treatment system was not operational upon arrival and the cause was determined to be a power outage that occurred on June 10, 2014. The groundwater recovery and treatment system was completely operational upon departure from the site on June 14, 2014.

IWM personnel mobilized to the site on June 26, 2014 to complete biweekly system operation and maintenance activities and to evaluate the Chatterbox telemetry system. An electrician with Dale Hubbard Electric, Inc. was onsite during the Chatterbox evaluation and ruled out electrical issues. The Chatterbox was reprogrammed under the direction of the manufacturer (Raco) and tested by simulating various alarm criteria including a high pressure alarm inside the air stripper and a power outage. After reprogramming, the Chatterbox was completely operational during the simulated alarms. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on June 26, 2014.

IWM personnel mobilized to the site on July 8, 2014 after an inclement weather event to confirm that the repairs/reprogramming of the Chatterbox telemetry system had been successful. Prior to the repairs/reprogramming, the Chatterbox telemetry system had failed to report power outages that had deactivated the system during inclement weather. The groundwater recovery and treatment system, including the Chatterbox telemetry system, was completely operational upon arrival and departure from the site on July 8, 2014.

### **Groundwater Level Measurements**

IWM personnel gauged select monitoring wells (IT-2, IT-3, MW-3, MW-9, MW-12R, MW-20, MW-21, MW-22, MW-23, MW-24, MW-26, MW-27, MW-28, MW-29, and MW-30) at the site on a monthly basis using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. For this semi-annual reporting period, depth to water in the monitoring wells ranged from 7.28 feet below top of casing (TOC) in MW-9 to 18.05 feet below TOC in MW-22. During this reporting period, neither LNAPL nor DNAPL were detected within the monitoring and

recovery well network at the site. Additionally, the water table has raised an average of approximately 1.99 feet from April to October 2014. The groundwater elevation data indicates that the groundwater recovery and treatment system maintains hydraulic control of the dissolved VOC plume. **Figure 1** is a site plan illustrating pertinent site features and well locations. A groundwater elevation contour map based on the most recent gauging event (October 8, 2014) is provided as **Figure 2**. Historic groundwater elevation data and groundwater contour maps for this reporting period are provided in each monthly O&M report included in **Appendix A**. Groundwater elevations during this semi-annual reporting period are provided in **Table 2**.

#### **Quarterly Treatment System Sampling and Analysis**

On May 16, 2014, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for VOC analysis by SW-846 Method 8260.

Laboratory analytical results from the May 16, 2014 quarterly system sampling activities indicated the presence of 1,1,1-trichloroethane and trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. 1,1-Dichloroethane was detected in the groundwater samples obtained from recovery wells RW-2 and RW-3. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. No constituents of concern were detected in the remedial system's effluent water sample.

On August 22, 2014, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace for VOC analysis by SW-846 Method 8260.

Laboratory analytical results from the August 22, 2014 quarterly system sampling activities indicated the presence of 1,1,1-trichloroethane and trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-3 and RW-5. 1,1-Dichloroethane was detected in the groundwater sample obtained from recovery well RW-2. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, RW-4, and RW-5. No constituents of concern were detected in the remedial system's effluent water sample.

The analytical reports for the quarterly system sampling events are included in **Appendix B**. A summary of quarterly system sampling results is included in **Table 3**.

#### **Semi-Annual Groundwater Sampling and Analysis**

On October 8, 2014, groundwater samples were obtained from monitoring wells IT-2, IT-3, MW-12R, MW-20, MW-22, MW-28, MW-29, and MW-30 for VOC analysis to evaluate current groundwater quality at the site. Groundwater samples were collected using dedicated, disposable, bottom-loading bailers to reduce the risk of cross-contamination. Three-well volumes were purged prior to sample collection. Samples were

submitted to Pace for VOC analysis using US EPA SW 846 Method 8260. Groundwater sampling logs are provided in **Appendix C**.

The highest VOC concentrations were detected in the groundwater samples obtained from monitoring well MW-22 (668.4 µg/L total VOCs) located 30 feet northwest of recovery well RW-3 and monitoring well MW-12R (494.5 µg/L total VOCs) located adjacent to recovery well RW-2. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentration. The concentrations of dissolved VOCs in monitoring wells MW-12/12R and MW-22 decreased substantially following installation of the groundwater recovery and treatment system in 1996. Overall, total VOC concentrations in these wells have been relatively stable during operation of the treatment system from 2000 to 2014.

1,1-Dichloroethane was detected in monitoring well IT-2. Trichloroethene was detected in monitoring wells IT-2, MW-12R, MW-22, and MW-28. Cis-1,2-dichloroethene was detected in monitoring wells IT-2, MW-12R, and MW-22. 1,1,1-Trichloroethane was detected in monitoring wells MW-12R, MW-22, MW-28, and MW-30. Tetrachloroethene was detected in monitoring wells MW-12R, MW-22, and MW-28.

Both monitoring wells IT-2 and IT-3 are located down-gradient from the site. Overall, total dissolved VOC concentrations in monitoring wells IT-2 and IT-3 have decreased over time during operation of the groundwater recovery and treatment system. Total dissolved VOC concentrations in monitoring wells MW-12R and MW-30 have decreased since the startup of the remedial system in 1996. Total dissolved VOC concentrations decreased substantially in monitoring wells MW-22 and MW-28 during the initial startup of the recovery system in 1996 and have been decreasing during operation of the groundwater recovery and treatment system from 2000 to 2014. Tetrachloroethene and trichloroethene concentrations were reduced significantly (47% and 37%, respectively) in monitoring well MW-22 as part of a three month enhanced bioremediation pilot study conducted in early 2007. During the implementation of the full scale enhanced bioremediation activities (July 2010 through March 2011), tetrachloroethene concentrations decreased 22% in monitoring well MW-22. Post full scale enhanced bioremediation activities, tetrachloroethene concentrations have decreased an additional 48% in monitoring well MW-22.

The dissolved VOC concentrations observed in monitoring well MW-12R initially (October 2010) increased immediately after implementation of the full scale enhanced bioremediation. The reason for the increased dissolved VOC concentrations is because several combination groundwater and microbe injection points (IN-4, IN-5, IN-6, and IN-7) were installed immediately hydraulically up-gradient from this well and the injection points were able to “flush” the VOC impacted saturated soil, thus increasing the dissolved VOC concentrations while simultaneously decreasing the adsorbed VOC concentrations. Furthermore, the dissolved VOCs were drawn to and recovered by hydraulically down-gradient recovery wells RW-2 (adjacent to MW-12R) and RW-5 (approximately 45 feet west of MW-12R). Since monitoring well MW-12R is located between these two recovery wells, this explains why the dissolved VOC concentrations increased immediately after start-up of the full scale enhanced bioremediation activities. It should be noted that the dissolved VOCs displayed a decrease in concentrations during the April 2011 groundwater sampling event. During the October 2011 event, a substantial rebound of dissolved VOC concentrations was observed. Dissolved VOC concentrations in monitoring well MW-12R decreased approximately 83.3% from the October 2011 sampling event to the October 2014 sampling event.

No VOCs were detected in the groundwater samples obtained from monitoring wells IT-3, MW-20, and MW-29.

A trip blank and a field duplicate sample (MW-30) were obtained per IDEM Minimum Data Documentation Requirements dated February 13, 2003. The trip blank and the duplicate sample were

analyzed for VOCs. The trip blank was below laboratory detection limits for all constituents and the duplicate analysis was relatively consistent with the sample which was duplicated. Laboratory data sheets are provided in **Appendix D**. A summary of groundwater analytical results is included in **Table 4**.

### **Conclusions**

Based on the data collected during this semi-annual post closure monitoring period, the following conclusions can be asserted:

1. The groundwater recovery and treatment system maintains hydraulic control of the dissolved VOC plume.
2. The cone of influence developed by the on-site recovery wells extends beyond the downgradient site property boundary.
3. The average combined influent rate for the groundwater recovery system is approximately 28 gpm.
4. The highest dissolved PCE concentrations were detected near the suspected release area where the sanitary sewer crosses the existing storm sewer.
5. The highest VOC concentrations were detected in the groundwater samples obtained from monitoring wells MW-22 and MW-12R, located in the vicinity of recovery wells RW-3 and RW-2, respectively. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentrations.
6. Following activation of the groundwater recovery and treatment system, total dissolved VOC concentrations decreased substantially. Since initial startup of the remedial system, total VOC concentrations have displayed decreasing trends in monitoring wells IT-2, IT-3, MW-12/12R, MW-22, MW-28, and MW-30.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111.

Sincerely,

**IWM CONSULTING GROUP, LLC**

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

Notes:

Results in micrograms per liter (ug/l).

\* - Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.

\*\* - Methylene chloride was detected at 5.9 ug/L; however, this detection was most likely due to a laboratory artifact.

Notes:

Results in micrograms per liter (ug/l).

ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.

Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.

J - Estimated value.

Notes:

Results in micrograms per liter (ug/l).

ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.

Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.

J - Estimated value.

## Notes:

Results in micrograms per liter (ug/l).

ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.

Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.

J - Estimated value.

\* Depth to water in MW-30 on May 30, 2003 is believed to be erroneous.

## **APPENDIX A**

### **Monthly O&M Reports**

7428 Rockville Road, Indianapolis, IN 46214

June 6, 2014

Mr. Sam Waldo  
Director, Environmental Affairs  
AMPHENOL CORPORATION  
World Headquarters  
358 Hall Avenue  
Wallingford, CT 06492

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**

Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the April 28 through May 30, 2014 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

**Groundwater Level Measurements**

On May 2, 2014, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 7.76 feet below top of casing (TOC) in MW-9 to 16.91 feet below TOC in MW-28. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the May 2, 2014 depth to water measurements has been included as **Figure 2**.

**Groundwater Treatment System**

From April 28 through May 30, 2014, approximately 1,364,733 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 195,514,522 gallons. The average influent groundwater recovery rate from April 28 through May 30, 2014 was approximately 29.62 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on May 2, 2014 to complete quarterly, monthly, and bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon departure from the site on May 2, 2014.

IWM personnel mobilized to the site on May 16, 2014 to complete biweekly system operation and maintenance activities and obtain quarterly system samples. The groundwater recovery and treatment system was completely operational upon departure from the site on May 16, 2014.

IWM personnel mobilized to the site on May 30, 2014 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon departure from the site on May 30, 2014.

### **Quarterly Treatment System Sampling**

On May 16, 2014, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for volatile organic compound (VOC) analysis by SW-846 Method 8260B.

Laboratory analytical results from the May 16, 2014 quarterly system sampling activities indicated the presence of 1,1,1-trichloroethane and trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. 1,1-Dichloroethane was detected in the groundwater samples obtained from recovery wells RW-2 and RW-3. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. No constituents of concern were detected in the remedial system's effluent water sample.

Historic quarterly system sampling analytical results are summarized in **Table 1**. Laboratory data sheets are provided in **Attachment D**.

### **Schedule of Activities**

Monthly and biweekly system operation and maintenance activities are scheduled for the month of June 2014. Site visits are scheduled for the weeks beginning June 9 and June 23, 2014. The information from these site inspections will be included in the June 2014 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,  
**IWM CONSULTING GROUP, LLC**

Christopher R. Newell  
Project Geologist

Bradley E. Gentry, LPG  
Vice-President

Notes:

Results in micrograms per liter (ug/L).

\* - Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.

\*\* - Methylene chloride was detected at 5.9 ug/L, however, this detection was most likely due to a laboratory artifact.

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**System Sample Laboratory Analytical Report**

May 31, 2014

Mr. Chris Newell  
IWM Consulting  
7428 Rockville Road  
Indianapolis, IN 46214

RE: Project: Amphenol  
Pace Project No.: 5097845

Dear Mr. Newell:

Enclosed are the analytical results for sample(s) received by the laboratory on May 16, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt  
kenneth.hunt@pacelabs.com  
Project Manager

## QUALIFIERS

Project: Amphenol  
Pace Project No.: 5097845

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

Wallingford, CT 06492

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED  
CORRECTIVE MEASURE**

Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the May 30 through June 26, 2014 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

**Groundwater Level Measurements**

On June 14, 2014, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 7.28 feet below top of casing (TOC) in MW-9 to 16.52 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities after being restarted upon arrival. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the June 14, 2014 depth to water measurements has been included as **Figure 2**.

**Groundwater Treatment System**

From May 30 through June 26, 2014, approximately 1,000,125 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 196,514,647 gallons. The average influent groundwater recovery rate from May 30 through June 26, 2014 was approximately 25.7 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on June 14, 2014 to complete monthly and biweekly operation and maintenance activities. The groundwater recovery and treatment system was not operational upon arrival and the cause was determined to be a power outage that occurred on June 10, 2014. The groundwater recovery and treatment system was completely operational upon departure from the site on June 14, 2014.

Operation & Maintenance of the Implemented Corrective Measure  
**Former Amphenol Facility**  
Franklin, Indiana  
Page 2 of 2

IWM personnel mobilized to the site on June 26, 2014 to complete biweekly system operation and maintenance activities and to evaluate the Chatterbox telemetry system. An electrician with Dale Hubbard Electric, Inc. was onsite during the Chatterbox evaluation and ruled out electrical issues. The Chatterbox was reprogrammed under the direction of the manufacturer (Raco) and tested by simulating various alarm criteria including a high pressure alarm inside the air stripper and a power outage. After reprogramming, the Chatterbox was completely operational during the simulated alarms. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on June 26, 2014.

**Schedule of Activities**

Monthly and biweekly system operation and maintenance activities are scheduled for the month of July 2014. Site visits are scheduled for the weeks beginning July 7 and July 21, 2014. The information from these site inspections will be included in the July 2014 Progress Report.

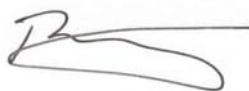

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher R. Newell, LPG  
Project Geologist

Bradley E. Gentry, LPG  
Vice-President

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED  
CORRECTIVE MEASURE**

Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the June 26 through July 25, 2014 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

**Groundwater Level Measurements**

On July 11, 2014, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 8.16 feet below top of casing (TOC) in MW-9 to 17.11 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a Groundwater Elevation Map based on the July 11, 2014 depth to water measurements has been included as **Figure 2**.

**Groundwater Treatment System**

From June 26 through July 25, 2014, approximately 1,239,471 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 197,754,118 gallons. The average influent groundwater recovery rate from June 26 through July 25, 2014 was approximately 29.7 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on July 8, 2014 after an inclement weather event to confirm that the repairs/reprogramming of the Chatterbox telemetry system had been successful. Prior to the repairs/reprogramming, the Chatterbox telemetry system had failed to report power outages that had deactivated the system during inclement weather. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on July 8, 2014.

IWM personnel mobilized to the site on July 11, 2014 to complete monthly and biweekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on July 11, 2014.

IWM personnel mobilized to the site on July 25, 2014 to complete biweekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on July 25, 2014.

#### **Schedule of Activities**

Quarterly, monthly, and biweekly system operation and maintenance activities are scheduled for the month of August 2014. Site visits are scheduled for the weeks beginning August 4 and August 18, 2014. The information from these site inspections will be included in the August 2014 Progress Report.

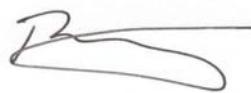

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher R. Newell, LPG #2397  
Project Geologist

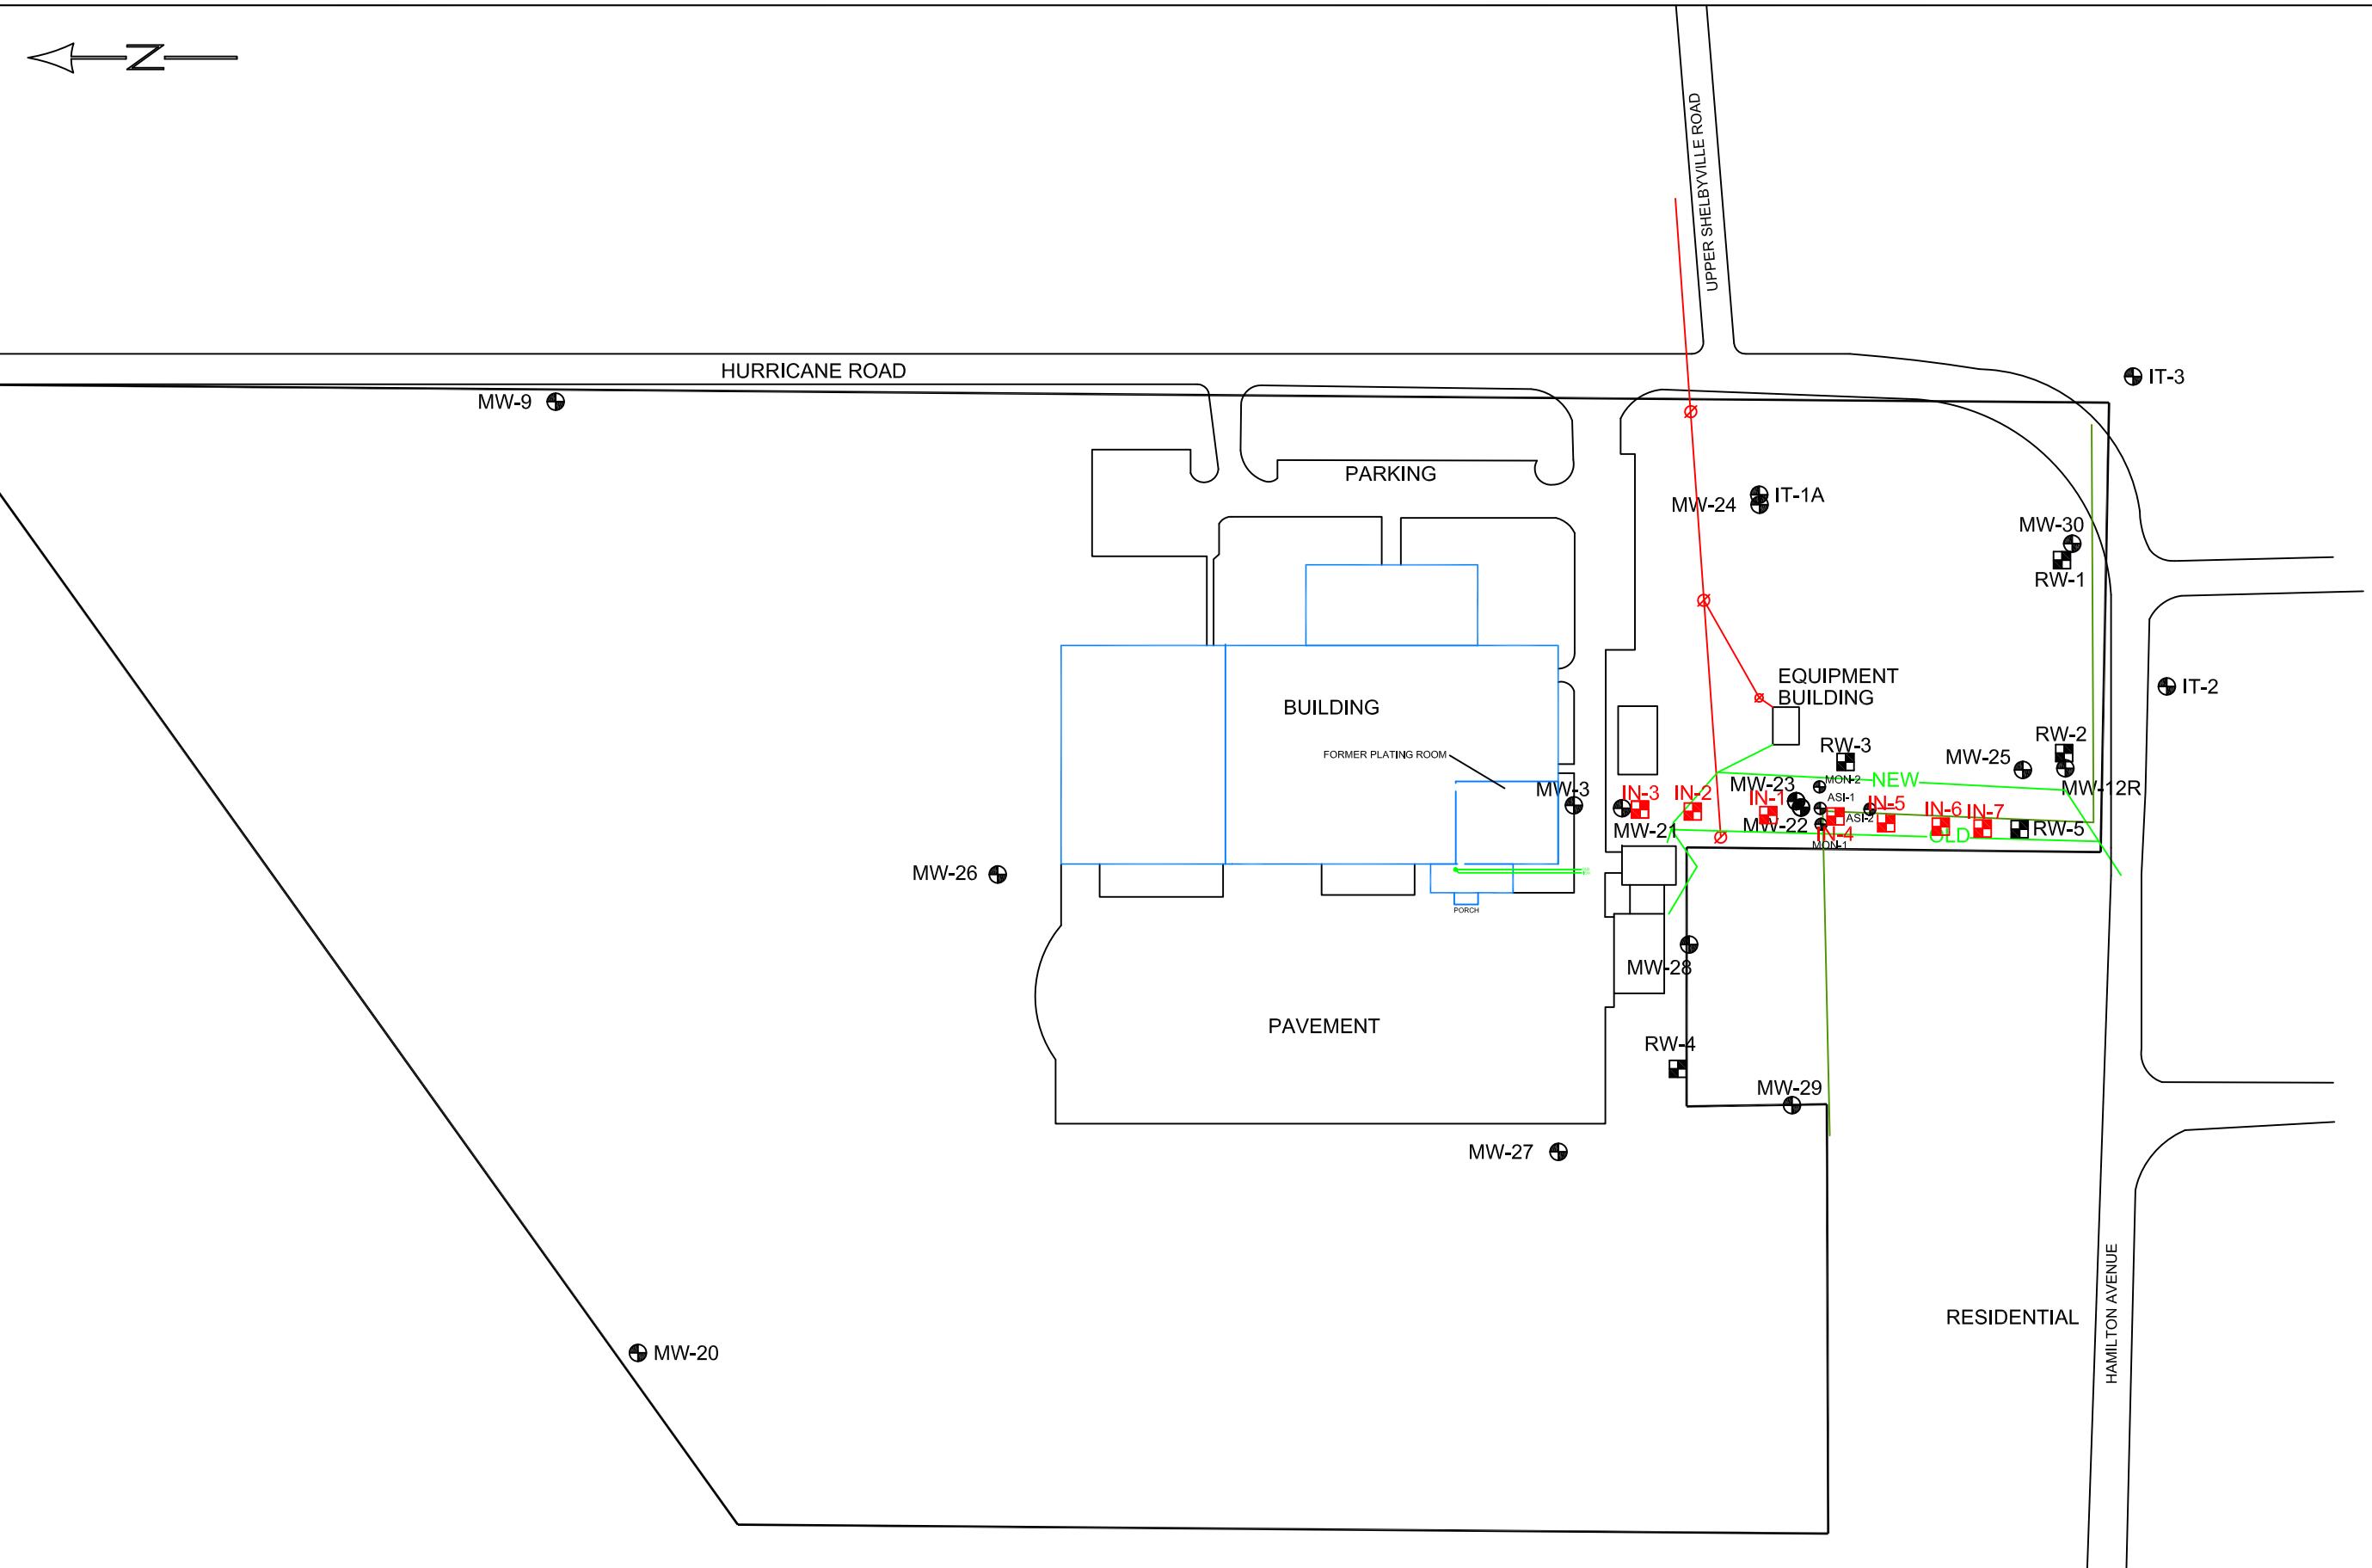

Bradley E. Gentry, LPG #2165  
Vice-President

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**

Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the July 25 through August 22, 2014 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

**Groundwater Level Measurements**

On August 8, 2014, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 8.86 feet below top of casing (TOC) in MW-9 to 17.50 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a Groundwater Elevation Map based on the August 8, 2014 depth to water measurements has been included as **Figure 2**.

**Groundwater Treatment System**

From July 25 through August 22, 2014, approximately 1,144,121 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 198,898,239 gallons. The average influent groundwater recovery rate from July 25 through August 22, 2014 was approximately 28.4 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on August 8, 2014 to complete quarterly, monthly, and bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on August 8, 2014.

IWM personnel mobilized to the site on August 22, 2014 to complete biweekly system operation and maintenance activities and obtain quarterly system samples. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on August 22, 2014.

### **Quarterly Treatment System Sampling**

On August 22, 2014, influent samples from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 and a combined effluent sample were obtained to evaluate the groundwater treatment system. Each of the influent sample taps was allowed to run for at least 10 seconds. Prior to sampling, water flow from the tap was reduced to minimize turbulence and agitation. All samples were submitted to Pace Analytical Services, Inc. (Pace), located in Indianapolis, Indiana for volatile organic compound (VOC) analysis by SW-846 Method 8260B.

Laboratory analytical results from the August 22, 2014 quarterly system sampling activities indicated the presence of 1,1,1-trichloroethane and trichloroethene in groundwater samples obtained from recovery wells RW-1, RW-2, RW-3, and RW-5. Cis-1,2-dichloroethene was detected in the groundwater samples obtained from recovery wells RW-3 and RW-5. 1,1-Dichloroethane was detected in the groundwater sample obtained from recovery well RW-2. Tetrachloroethene was detected in the groundwater samples obtained from recovery wells RW-2, RW-3, RW-4, and RW-5. No constituents of concern were detected in the remedial system's effluent water sample.

Historic quarterly system sampling analytical results are summarized in **Table 1**. Laboratory data sheets are provided in **Attachment D**.

### **Schedule of Activities**

Monthly and biweekly system operation and maintenance activities are scheduled for the month of September 2014. Site visits are scheduled for the weeks beginning September 1, September 15, and September 29, 2014. The information from these site inspections will be included in the September 2014 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher R. Newell, LPG #2397  
Project Geologist

Bradley E. Gentry, LPG #2165  
Vice-President

Notes:

Results in micrograms per liter (ug/l).

\* - Naphthalene and MTBE were detected at 18 and 17 ug/L, respectively; however, these detections are most likely due to laboratory artifacts or handling issues.

\*\* - Methylene chloride was detected at 5.9 ug/L; however, this detection was most likely due to a laboratory artifact.

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/196.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**System Sample Laboratory Analytical Report**

September 04, 2014

Mr. Chris Newell  
IWM Consulting  
7428 Rockville Road  
Indianapolis, IN 46214

RE: Project: Amphenol  
Pace Project No.: 50102643

Dear Mr. Newell:

Enclosed are the analytical results for sample(s) received by the laboratory on August 22, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt  
kenneth.hunt@pacelabs.com  
Project Manager

## QUALIFIERS

Project: Amphenol  
Pace Project No.: 50102643

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

**Re: OPERATION AND MAINTENANCE OF THE APPROVED IMPLEMENTED CORRECTIVE MEASURE**

Former Amphenol Facility  
980 B Hurricane Road  
Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the August 22 through September 26, 2014 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

**Groundwater Level Measurements**

On September 5, 2014, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 9.16 feet below top of casing (TOC) in MW-9 to 17.65 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a Groundwater Elevation Map based on the September 5, 2014 depth to water measurements has been included as **Figure 2**.

**Groundwater Treatment System**

From August 22 through September 26, 2014, approximately 1,402,717 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 200,300,956 gallons. The average influent groundwater recovery rate from August 22 through September 26, 2014 was approximately 27.8 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on September 5, 2014 to complete monthly and bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on September 5, 2014.

Operation & Maintenance of the Implemented Corrective Measure  
**Former Amphenol Facility**  
Franklin, Indiana  
Page 2 of 2

---

IWM personnel mobilized to the site on September 19, 2014 to complete biweekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on September 19, 2014.

IWM personnel mobilized to the site on September 26, 2014 to obtain totalizer readings from the groundwater recovery and treatment system. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on September 26, 2014.

**Schedule of Activities**

Monthly and biweekly system operation and maintenance activities and semi-annual groundwater sampling activities are scheduled for the month of October 2014. Site visits are scheduled for the weeks beginning September 29, October 13, and October 27, 2014. The information from these site inspections will be included in the October 2014 Progress Report.

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher R. Newell, LPG #2397  
Project Geologist

Bradley E. Gentry, LPG #2165  
Vice-President

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

Franklin, Indiana

Dear Mr. Waldo:

Enclosed, please find a summary of the operation and maintenance (O&M) and gauging activities completed by IWM Consulting Group, LLC (IWM) at the above-referenced site. This report summarizes the activities completed during the September 26 through October 31, 2014 reporting period. IWM personnel inspected the site on a regular basis to monitor system operations and ground water recovery and treatment.

**Groundwater Level Measurements**

On October 8, 2014, IWM personnel gauged the monitoring well network at the site using an electronic oil/water interface probe to determine the depth to water and the presence of detectable thickness of liquid-phase hydrocarbons. Depth to water in the monitoring wells ranged from 9.81 feet below top of casing (TOC) in MW-9 to 18.05 feet below TOC in MW-22. Liquid-phase hydrocarbons were not detected within the monitoring and recovery well network at the site. Recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5 were operational during groundwater gauging activities. **Figure 1** is a site plan illustrating pertinent site features and well locations. The groundwater elevation data is summarized in **Attachment A**, and a groundwater contour map based on the October 8, 2014 depth to water measurements has been included as **Figure 2**.

**Groundwater Treatment System**

From September 26 through October 31, 2014, approximately 1,359,523 gallons of groundwater were treated and discharged from recovery wells RW-1, RW-2, RW-3, RW-4, and RW-5. Based on data provided by EMCON, Handex, and IWM field data sheets, the total volume of groundwater recovered to date is approximately 201,660,479 gallons. The average influent groundwater recovery rate from September 26 through October 31, 2014 was approximately 26.97 gpm. **Attachment B** includes a table and a graph illustrating the recovery rates to date, and **Attachment C** contains copies of Field Data Sheets completed by IWM personnel.

IWM personnel mobilized to the site on October 8, 2014 to complete bi-weekly and monthly system operation and maintenance activities and to complete semi-annual groundwater sampling activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on October 8, 2014.

IWM personnel mobilized to the site on October 17, 2014 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on October 17, 2014.

IWM personnel mobilized to the site on October 31, 2014 to complete bi-weekly system operation and maintenance activities. The groundwater recovery and treatment system was completely operational upon arrival and departure from the site on October 31, 2014.

### **Semi-Annual Groundwater Sampling and Analysis**

On October 8, 2014, groundwater samples were obtained from monitoring wells IT-2, IT-3, MW-12R, MW-20, MW-22, MW-28, MW-29, and MW-30 for VOC analysis to evaluate current groundwater quality at the site. Groundwater samples were collected using dedicated, disposable, bottom-loading bailers to reduce the risk of cross-contamination. Three-well volumes were purged prior to sample collection. Samples were submitted to Pace Analytical Services, Inc. (Pace) for VOC analysis using US EPA SW 846 Method 8260B. Groundwater sampling logs are provided in **Attachment D**.

The highest VOC concentrations were detected in the groundwater samples obtained from monitoring well MW-22 (668.4 µg/L total VOCs) located 30 feet northwest of recovery well RW-3 and monitoring well MW-12R (494.5 µg/L total VOCs) located adjacent to recovery well RW-2. Therefore, the groundwater recovery and treatment system is effectively targeting the area of greatest VOC concentration. The concentrations of dissolved VOCs in monitoring wells MW-12/12R and MW-22 decreased substantially following installation of the groundwater recovery and treatment system in 1996. Overall, total VOC concentrations in these wells have been relatively stable during operation of the treatment system from 2000 to 2014.

1,1-Dichloroethane was detected in monitoring well IT-2. Trichloroethene was detected in monitoring wells IT-2, MW-12R, MW-22, and MW-28. Cis-1,2-dichloroethene was detected in monitoring wells IT-2, MW-12R, and MW-22. 1,1,1-Trichloroethane was detected in monitoring wells MW-12R, MW-22, MW-28, and MW-30. Tetrachloroethene was detected in monitoring wells MW-12R, MW-22, and MW-28.

Both monitoring wells IT-2 and IT-3 are located down-gradient from the site. Overall, total dissolved VOC concentrations in monitoring wells IT-2 and IT-3 have decreased over time during operation of the groundwater recovery and treatment system. Total dissolved VOC concentrations in monitoring wells MW-12R and MW-30 have decreased since the startup of the remedial system in 1996. Total dissolved VOC concentrations decreased substantially in monitoring wells MW-22 and MW-28 during the initial startup of the recovery system in 1996 and have been decreasing during operation of the groundwater recovery and treatment system from 2000 to 2014. Tetrachloroethene and trichloroethene concentrations were reduced significantly (47% and 37%, respectively) in monitoring well MW-22 as part of a three month enhanced bioremediation pilot study conducted in early 2007. During the implementation of the full scale enhanced bioremediation activities (July 2010 through March 2011), tetrachloroethene concentrations decreased 22% in monitoring well MW-22. Post full scale enhanced bioremediation activities, tetrachloroethene concentrations have decreased an additional 48% in monitoring well MW-22.

The dissolved VOC concentrations observed in monitoring well MW-12R initially (October 2010) increased immediately after implementation of the full scale enhanced bioremediation. The reason for the increased dissolved VOC concentrations is because several combination groundwater and microbe injection points (IN-4, IN-5, IN-6, and IN-7) were installed immediately hydraulically up-gradient from this well and the injection points were able to “flush” the VOC impacted saturated soil, thus increasing the dissolved VOC

concentrations while simultaneously decreasing the adsorbed VOC concentrations. Furthermore, the dissolved VOCs were drawn to and recovered by hydraulically down-gradient recovery wells RW-2 (adjacent to MW-12R) and RW-5 (approximately 45 feet west of MW-12R). Since monitoring well MW-12R is located between these two recovery wells, this explains why the dissolved VOC concentrations increased immediately after start-up of the full scale enhanced bioremediation activities. It should be noted that the dissolved VOCs displayed a decrease in concentrations during the April 2011 groundwater sampling event. During the October 2011 event, a substantial rebound of dissolved VOC concentrations was observed. Dissolved VOC concentrations in monitoring well MW-12R decreased approximately 83.3% from the October 2011 sampling event to the October 2014 sampling event.

No VOCs were detected in the groundwater samples obtained from monitoring wells IT-3, MW-20, and MW-29.

A trip blank and a field duplicate sample (MW-30) were obtained per IDEM Minimum Data Documentation Requirements dated February 13, 2003. The trip blank and the duplicate sample were analyzed for VOCs. The trip blank was below laboratory detection limits for all constituents and the duplicate analysis was relatively consistent with the sample which was duplicated. Groundwater sampling field logs are provided in **Attachment D**. Laboratory data sheets are provided in **Attachment E**. A summary of groundwater analytical results is included in **Table 1**.

### **Schedule of Activities**

Quarterly, monthly, and biweekly system operation and maintenance activities are scheduled for the month of November 2014. Site visits are scheduled for the weeks beginning November 10 and November 24, 2014. The information from these site inspections will be included in the November 2014 Progress Report.

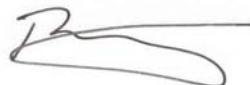

Should you have any questions regarding this site or information summarized within this report, please contact the undersigned at (317) 347-1111. IWM Consulting Group, LLC appreciates the opportunity to provide environmental services to Amphenol Corporation.

Sincerely,

**IWM CONSULTING GROUP, LLC**

Christopher R. Newell, LPG  
Project Geologist

Bradley E. Gentry, LPG  
Vice-President

## Notes:

Results in micrograms per liter (ug/l).

ND - Not Detected - analyte not detected above laboratory method detection limit of 5.0 ug/L.

Samples were analyzed for VOCs using USEPA Method 8260 B.

NA - Not Available.

J - Estimated value.

\* Depth to water in MW-30 on May 30, 2003 is believed to be erroneous.

**Notes:**

- Data prior to 4/12/96 was collected by EMCON.
- A new flow baseline (zero cumulative flow) was established on August 3, 1995, due to flow meter replacement.
- Erroneous flow meter reading from RW-3 on 10/1/96.
- Due to a flow meter malfunction, the totalizer for RW-2 showed a negative flow of 1,051 gallons on January 14, 1997.
- Due to a flow meter malfunction, the totalizer for RW-3 showed a negative flowage of 1,538 gallons, 19,689 gallons, and 20,197 gallons on March 14, March 28, and May 7, 1997, respectively.
- Due to a flow meter malfunction, the total gallons pumped between July 2 and July 16, 1998 was estimated at 10 gpm for RW-2 and RW-3.
- Recovery wells converted from pneumatic to electrical submersible pumps in March 1999.
- Recovery well RW-4 installed late February 1999.
- Recovery well RW-5 was initiated on July 20, 2010.
- Recovery wells RW-1, RW-2, RW-3 and RW-4 were developed on May 15, 2000.
- NEEP Systems air stripper installed on August 29 through August 31, 2000.

**Groundwater Laboratory Analytical Report**

October 21, 2014

Mr. Chris Newell  
IWM Consulting  
7428 Rockville Road  
Indianapolis, IN 46214

RE: Project: Amphenol  
Pace Project No.: 50105028

Dear Mr. Newell:

Enclosed are the analytical results for sample(s) received by the laboratory on October 08, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt  
kenneth.hunt@pacelabs.com  
Project Manager

## QUALIFIERS

Project: Amphenol  
Pace Project No.: 50105028

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

## **APPENDIX B**

### **Laboratory Analytical Reports Groundwater Recovery and Treatment System Samples**

May 31, 2014

Mr. Chris Newell  
IWM Consulting  
7428 Rockville Road  
Indianapolis, IN 46214

RE: Project: Amphenol  
Pace Project No.: 5097845

Dear Mr. Newell:

Enclosed are the analytical results for sample(s) received by the laboratory on May 16, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt  
kenneth.hunt@pacelabs.com  
Project Manager

## QUALIFIERS

Project: Amphenol  
Pace Project No.: 5097845

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Amphenol  
Pace Project No.: 50102643

Dear Mr. Newell:

Enclosed are the analytical results for sample(s) received by the laboratory on August 22, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt  
kenneth.hunt@pacelabs.com  
Project Manager

## QUALIFIERS

Project: Amphenol  
Pace Project No.: 50102643

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

### **Laboratory Analytical Report Semi-Annual Groundwater Samples**

October 21, 2014

Mr. Chris Newell  
IWM Consulting  
7428 Rockville Road  
Indianapolis, IN 46214

RE: Project: Amphenol  
Pace Project No.: 50105028

Dear Mr. Newell:

Enclosed are the analytical results for sample(s) received by the laboratory on October 08, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt  
kenneth.hunt@pacelabs.com  
Project Manager

## QUALIFIERS

Project: Amphenol  
Pace Project No.: 50105028

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
